Murphy L., Richards C., Gentles S., Harris D., Barrell B.G.,
Rajandream M.A.;
Submitted (JAN-1995) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: It has a serine and a weak tyrosine phosphatase activity with ratios of serine to tyrosine phosphatase activity as high as 200:1. It is essential for growth or germination at 37 degrees celsius. May have a role in the heat shock response. Involved in tRNA splicing and cell separation.
-!-'CATALYTIC ACTIVITY: A phosphoprotein + H(2)O = a protein +
                                                                                                                                                                                                                                                                                                                                                                                                      SEQUENCE FROM N.A.

TISSUB SPECIFICITY: Beta-1 is expressed ubiquitously; beta-2 is
expressed exclusively in brain and heart; beta-4 is expressed
exclusively in brain and intestine; beta-3 and beta-5 are
expressed exclusively in testis and intestine.
SIMILARITY: Belongs to the PP2C family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Event=Alternative splicing; Named isoforms=5;
Comment=Isoforms only differ in their C-terminus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Hydrolase; Magnesium; Manganese; Multigene family;

"A membrane-bound protein phosphatase type 2C from Paramecium tetraurelia. Purification, characterization, and cloning.";

J. Biol. Chem. 269:32774-32780(1994).

-!-FUNCTION: Enzyme with a broad specificity.

-!- CATALXTIC ACTIVITY: A phosphoprotein + H(2)O = a protein +
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         316 ------CHDPNEAAHAVTEQAIQYGTEDNSTAVVVPF 346
